SUMMARY

Aspiring Software Engineer and Computer Science Student specializing in Java and Spring Boot backend development, with strong experience in React and Next.js frontends. Hands-on with REST API design, microservices architecture, and building secure, scalable systems from design to deployment. Comfortable across the full stack — from database design to production deployment.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science & Engineering, BMIT, Solapur | Batch: 2023–2027 | CGPA: 8.68/10.00

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL, HTML5, CSS3

Frontend: React.js, Redux, Next.js, Tailwind CSS

Backend: Spring Boot, Spring MVC, Spring Security, Spring AI, Microservices, REST APIs, JPA/Hibernate, Apache Kafka, Eureka, Authentication (OAuth2, JWT, Keycloak)

Database: MongoDB, MySQL, PostgreSQL

Tools/Technology: AWS (EC2, S3), Docker, Git, GitHub, Maven, Postman, JUnit, Mockito, CI/CD

Core CS: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks

EXPERIENCE

Full-Stack Developer — [Rishikesh Distributors](#) (November 2024 – January 2025) [GitHub](#)

- Built and deployed a full-stack B2B CRM platform using the MERN stack (MongoDB, Express, React, Node.js) for a pharmaceutical distribution business, digitizing manual phone/WhatsApp-based ordering workflows for 50+ retailers, with role-based dashboards and JWT authentication for 2 user types — retailers access live pricing and place orders, while admins manage inventory and order fulfillment — alongside a dynamic scheme/discount engine automating pharma trade pricing.
- Built an analytics dashboard delivering day-wise, product-wise, and monthly sales insights for data-driven decision-making, gaining hands-on experience in full-stack architecture, database design, and real-time order data flow across the platform.

PROJECTS

SAARTHI – Voice-First Ride Assistant for the Visually Impaired | [GitHub](#)

React.js, Spring Boot, Spring AI, Supabase (PostgreSQL), Google STT/TTS, Gemini 1.5 Flash, Fast2SMS

- Built a voice-first ride-booking app enabling visually impaired users to book auto and cab rides entirely through voice, mapping dedicated hardware buttons (power, volume up/down) to core actions.
- Integrated Gemini 1.5 Flash as an NLP intent layer via a Spring Boot backend to parse free-form speech into structured ride intents (destination, vehicle type, action), powering a real-time two-sided booking system via Supabase Realtime where driver notifications fire on ride creation and rider confirmation plays via TTS within seconds.
- Implemented a safety layer with voice-triggered SOS — speaking "help" captures GPS location and dispatches an SMS alert with driver details to emergency contacts via Fast2SMS API.

FitTrack | Full-Stack Fitness Tracking Platform | [GitHub](#)

React, Spring Boot, Spring AI, Apache Kafka, MongoDB, Eureka, Keycloak, JWT, Spring Security

- Built a **microservices-based fitness tracking platform** with 5 services for workout logging, calorie tracking, and AI-powered recommendations using Spring Boot, Eureka, Kafka, Keycloak, JWT, and Spring Security.
- Integrated **Spring AI** to generate personalized workout and wellness recommendations based on user activity, enabling automated fitness plan creation through scalable event-driven communication.

ACHIEVEMENTS

- 1st Place, Frontend Development Competition (College Level)
- Selected for internal Smart India Hackathon (SIH)
